## End of Life Notification for Plasmon Diamond Software

Plasmon will discontinue selling Diamond Software effective November 30, 2007. This end of life notification includes all Diamond models and previous releases.

Plasmon will endeavor to support existing customers until November 30, 2012 and will continue to provide maintenance releases, as required. Support for Windows updates and new storage technologies will not be provided, including Windows Vista and UDO 2. Customers must continue with their maintenance contracts to ensure they receive timely support.

Read support of Plasmon's optical file-systems is now available in QStar's HSM Lite software thus simplifying a transition from Diamond. For a limited period, Plasmon is offering an upgrade program to further assist Diamond users. Please contact your Plasmon representative for more details.

For future purchases, Plasmon also recommends customers consider the UDO Archive Appliance™ as an alternative as it provides enhanced functionality. The UDO Archive Appliance provides the library management software, server, and RAID cache in a single, integrated solution. For more details, please see <http://www.plasmon.com/archiveappliance/index.html> or contact your Plasmon representative.
